Wounds Have Kidney

Wounds Have Kidney

Wounds Have Kidney... How to Find Out... The most common cause with your kidneys is to let your feet get a brick dust sediment, or settling, stringy or milky appearance often indicates an unhealthy condition of the kidneys; too frequent desire to pass it or pain in the back and bladder are out of order.

What To Do... The most common cause with your kidneys is to let your feet get a brick dust sediment, or settling, stringy or milky appearance often indicates an unhealthy condition of the kidneys; too frequent desire to pass it or pain in the back and bladder are out of order.

ODD WEATHER DEVICES

NATURE FURNISHES MANY SIMPLE BUT INTERESTING ONES.

Swiss Weather-House, a Common Toy, Quite Trustworthy - Chameleon Barometer a Curiosity - Simple Test for Humidity.

One of the oldest and simplest ways of telling whether the air is dry or moist is to suspend a piece of seaweed out of doors, or even in an apartment where there is no artificial heat. The weed is crisp and dry at the approach of fine weather, while it is flabby and moist when rain is likely.

A common toy, the Swiss weather-house, is really quite trustworthy in its forecasts, says the Strand. The woman, of course, emerges from the little house in fine weather, while the man comes out when wet conditions are to be expected.

In a medium state of the atmosphere both figures stand just inside the house. The movements are due to the twisting of a cord of catgut, a substance which is highly sensitive to changes in the humidity of the air.

Two very singular weather devices are those in which a frog and a leech are employed. In the former case a glass jar is filled with about two-thirds of its capacity with water. A little wooden ladder is constructed, and this is placed inside the jar.

A frog will live quite happily in such a position for a few weeks, and it will be found that in fine weather the creature will climb up to the top of the ladder. In stormy weather, however, the frog prefers to remain under the water.

Even more reliable as weather prophets are leeches. A single leech is placed in a broad glass bottle with a piece of perforated bladder or leather over the mouth. On the approach of fine or frosty weather the leech remains almost motionless, curled up at the bottom. When rain or wind is coming the creature rises to the surface, while a coming thunderstorm will cause it to be much agitated; at times the leech will even leave the water altogether, so sensitive is the animal to an electrical disturbance.

The chameleon barometer is a curiosity which has puzzled many people, but its construction is really very simple. The animal changes color according to the weather, being pink in damp conditions, purple in a variable state, and bright blue when the air is dry.

A cardboard mount is prepared, and this may be lettered in sections, Fair Storm and Change. The chameleon is sketched out on blotting-paper, and then immersed in a solution of chloride of sodium and gum arabic. Any chemist will make up the mixture.

A more beautiful chemist hygroscopic is formed of a flower made of white blotting-paper which has been immersed in the cobalt mixture. The blossoms show many varying shades, from bright pink to sky blue, with the changes in the degree of dampness in the atmosphere.

A somewhat curious storm-glass was introduced by the late Admiral Fitzroy. This is formed of a glass tube, stoppered, but with a small hole through the cork. Into the tube has been poured a mixture of camphor, nitre, sal ammoniac, alcohol and water. The changes in the state of the atmosphere are indicated by the production of feathery growths, these extending upward at the approach of a storm and retreating to the lower part of the tube in quiet weather.

Spiking Obsolete Nowadays. One reads in the war news that the Italians found that guns in the Tripoli forts "spiked." If that is meant literally they must have been guns of mainly antiquarian interest.

The expression, "spiking guns," is a survival from the day when all that was necessary to put a gun out of action (provided, of course, that you had access to it) was a large nail or spike and a hammer. You simply drove the nail into the touch-hole at the breech. If the nail was long enough to turn round at the end, on the bottom of the bore, so much the better.

It is just as simple, perhaps simpler, to put a modern gun out of action. All you want is a hammer. The breech block of the modern gun is held closed by screw threads, after the breech block is shut on the shell, a turn of two or three inches engages the threads. By knocking a burr on these threads you prevent them from engaging. Any attempt to fire the gun without the breech block being perfectly closed would, of course, be of material assistance to the enemy.

The Average Man. The average man is a person who can remember that you owe him \$5 a good while after he has forgotten that you named one of your children after him. -Galveston News.

Let the Truth Stand. In Lillian Whiting's "The Brownings" occurs this anecdote: "In the last days in Venice Browning was reading to his son and daughter-in-law that 'Epilogue' which sums up his own attitude to life and its problems - the familiar verse beginning, 'One who never turned his back, but marched breast forward,' and pausing at the stanza, said, 'It seems almost like praising myself to say that, and yet it is true, the simple truth, and so I shall not conceal it.'"

Paid Proportionate Share. A poor fellow having with difficulty procured an audience of the duke of Newcastle, told his grace he only came to support, and as they were of the same family, both being descended from Adam, hoped he should not be refused. "Surely not," said the duke, "surely not - there is a penny for you, and if all the rest of your relations will give you as much you'll be a richer man than I am."

SUNDAY SCHOOL AND EPWORTH LEAGUE.

An Institute to be Held in The Methodist Church May 23-24.

FIRST DAY - THURSDAY NIGHT.

8:15 - Service of song and prayer led by Rev. L. T. Singleton.

8:30 - Address, The Standard of Excellence, by M. W. Brabham, field secretary.

9:00 - The Bible, the Word of God, by Rev. R. F. Bumpass.

9:30 - Adjourn.

SECOND DAY - FRIDAY MORNING.

10:00 - Devotional service, conducted by Rev. Rufus Bradley.

10:20 - General topic: The Teacher (15 minutes each) - (1) Methods of Preparing and Presenting the Lesson, by Joseph Early; (2) Using the Blackboard to Get and Hold Attention, by Rev. J. W. Frank; (3) The End in View of the Real Teacher, by Rev. F. F. Eure.

11:05 - Round Table Discussion, led by M. W. Brabham.

11:40 - The Teacher Training Class, by Rev. L. F. Singleton.

12:00 - The Teachers' Meeting, by L. Leggett.

12:20 - Adjourn.

THIRD SESSION - FRIDAY AFTERNOON.

3:00 - Devotional Services, by Rev. J. W. Frank.

3:30 - General topic: Sunday School Management and Organization - (1) The Superintendent and His Program, by M. W. Brabham; (2) The Home Department, by Prof. Jesse B. Aiken; (3) The Cradle Roll Department, by Rev. Rufus Bradley.

Round Table Discussion, led by M. W. Brabham.

FOURTH SESSION - FRIDAY EVENING.

8:00 - Epworth League - Addresses by Rev. B. C. Thompson and Rev. L. T. Singleton.

National Recognition of Aycock.

The Youth's Companion, of Boston, perhaps the most influential general family weekly in the world, publishes on its editorial page a striking picture of ex-Governor Aycock and writes of him as follows: "Rarely does a man's death fit his life so well as that of the late Charles B. Aycock, once Governor of North Carolina. No wonder the manner of his dying touched the dramatic sense of the people of his State, and indeed, of the whole South."

"Aycock's life-work was a long and successful fight for more and better public schools for his people. He was a remarkable orator, and a public man of unusual parts and equipment, deeply interested in many public questions. But when, a decade or more ago, he was chosen Governor of his State, he determined to devote himself to what he felt to be the supreme need of his people at that time."

"It was a time when North Carolina, like the other Southern States, was at last emerging from the poverty and depression that followed the war - a period during which it had simply been impossible for the South to keep pace in educational progress with the rest of the country."

IMPORTANT MASONIC NOTICE.

Grand Scottish Rite Reunion at Enfield on May 31, 1912.

Enfield, N. C., May 20. - For the first time in years it will be possible for third and fourteenth degree Masons in good standing to receive all the degrees to and including the thirty-second degree at the Masonic Temple, Enfield, N. C., on Friday, May 31, 1912. A special dispensation has been secured from Hon. James Wakefield Cortland, thirty-third degree Sovereign Grand Inspector for North Carolina for Carolina Consistory of Charlotte, to hold a meeting at Enfield and communicate and confer all degrees. Ordinarily a Mason residing in Eastern North Carolina must go to Charlotte and spend a week to become a thirty-second degree Mason. This is a wonderful saving of time and expense, and such a dispensation is not easy to secure, and it is to be hoped that the Masons of Eastern North Carolina will appreciate this splendid opportunity and take advantage of it, or it will never again be granted.

Masons south of Enfield must come Friday morning on the shoofly and from the north on No. 89. You cannot come on No. 80 and get the degrees. Bring your blue lodge receipt.

While you will receive the degrees at Enfield, you will be a member of the higher bodies at Charlotte and the officers of Carolina Consistory, Charlotte, and the Charlotte Consistory Choir will be present and confer the degrees.

At Enfield we have the first two Scottish Rite bodies: Lodge of Perfection, fourth to fourteenth degree, and Chapter of Rose Croix, fifteenth to eighteenth degree. The Council of Kadosh, nineteenth to thirtieth, and Consistory, thirty-first and thirty-second degrees, are at Charlotte as stated. While you receive the degrees in Enfield you are members of the Charlotte bodies above the eighteenth degree. The fees charged by these bodies for the degrees are as follows: Lodge of Perfection, fourth to fourteenth degree inclusive, \$25.00; Chapter of Rose Croix, fifteenth to eighteenth degree inclusive, \$25.00; Council of Kadosh, nineteenth to thirtieth degree inclusive, \$30.00; Consistory, thirty-first and thirty-second degrees, \$65.50; total, \$135.50. The annual dues are \$1.00 per year in each body. All fourteenth degree Masons are especially invited to join our new Chapter of Rose Croix. A Mason may take all or any part of the degrees at this time. We shall have splendid work, beautiful music and a nice banquet. No Mason ever regretted beginning the beautiful Scottish Rite journey and you are cordially invited to start at this meeting.

A warm and cordial greeting awaits you at Enfield on Friday, May 31st.

Fraternally yours, HARRY W. GOWEN, 32 deg., Venerable Master Lodge of Perfection, and Wise Master Chapter Rose Croix.

Wonderful Curiosity. On the banks of the Willamette river, a short distance above Portland Ore., stands one of the most remarkable rocks in the world. It is known as the Balancing Rock. Rising from a broad base is a small column, roughly round in shape. Just above this is a huge mass of rock, bearing a tree on the summit, the total height of rock and column being about 100 feet. At the top of the pillar on which it stands, the big rock is very accurately balanced. For how many centuries this odd freak has stood not even the wisest scientists are able to determine but it has evidently been there for a very long period. The entire rock is of a volcanic nature, and the most singular thing about it is the fact that the knob and pillar are entirely disjointed from one another. Wind and weather, no doubt, are slowly wearing the Balancing Rock away, but the process is so imperceptible that, falling some unforeseen catastrophe, the monument will probably endure for many centuries.

Vanderbilt Gets a Tip. There are a lot of stories told of that famous amateur whip, Alfred Vanderbilt, who has once again taken to himself a wife. On one occasion he had an amusing experience while driving his coach between London and Brighton. At one stopping place an American approached him and handed him a substantial "tip." "I touched my hat in customary style," said Mr. Vanderbilt afterwards, "took the money and put it in my pocket, and I think I had the better of him. I don't know whether this particular American intended it as a snub because I know me; let us give him the benefit of the doubt - either way it's good enough." Mr. Vanderbilt, by the way, inherited \$20,000,000 from his father, the late Cornelius Vanderbilt. He owns over 100 prize horses and considers coaching "the finest sport in the world." - London Tatler.

Mighty River Amazon. It has been stated in official consular reports that the aggregate navigable waters of the Amazon and tributaries for all sort of craft are estimated to exceed 45,000 miles. The average depth is from 40 to 150 feet and the average width from 6 to 40 miles. At the mouth near Para the river is 138 miles wide, including the Island of Marajo and the northern and southern outlets. The immense volume of water discharged marks a path of yellow water in the blue of the Atlantic easily distinguishable for 150 miles at sea, creating a fresh water sea while out of sight of land. This yellow or old gold colored water uniting with the equatorial current trends to the north at the rate of six miles an hour, and entering the Caribbean sea forms what is recognized as the Gulf stream.

TO TELL FUNNY STORY

PROPER METHOD IS REVEALED BY THEOPHILUS SMIFF.

Take Joke by the Hand and Lead it About Until Thoroughly Acquainted, Then Assume Air of Undertaker and Spring It.

Ever since Cain slew Abel for calling one of his pet jokes a "chestnut," the world has been taking lessons in the art of being funny. The desire to be funny lurks in every human breast. There have been men who have lived it down, and these have invariably become great statesmen.

The Morning Telegraph has called upon Theophilus Smiff, the great expert and scientist, who is said to have been the first man who ever made a theater box office man smile, but he kept his secret well and became famous. Prof. Smiff said: "Humor is anything that is funny. It is in everything and in everybody. Extracted humor is followed by laughter, for it is by striking the responsive humor chord in the human breast that we get our only true effects."

"Therefore, no matter how good the joke, unless it is told in a manner to strike that cord, it falls of its own dead weight and furnishes us with one of the saddest sights in life."

"Select from any well known joke book a story. It should not be too new, as it is likely not to go so well as an old reliable joke that has been through several campaigns. Then cut from it all unnecessary adjectives, descriptions and apologies."

"Never apologize for a joke. 'Take your joke by the hand, and after having led it about until you know all of its family history, assume the air of a funeral director telling the relatives from which side of the casket they are to view the late lamented, and then give utterance to your jest."

"The best way is to get the point of the story well in mind and then put it away entirely until you need it. Nothing so interferes with the success of a joke as to have the point hanging around in plain sight before the story is well started."

"Remember above all things that the face should be solemn, and the voice low and well modulated, with just a suspicion of sadness in it."

"Learn to pause at the right place, and if you are in doubt at all, the best place to pause is just before you start. 'This has been known to save a man many friends that he otherwise might have lost.' - New York Morning Telegraph.

Butter Producing Country. There were 1,629,765,000 pounds butter, valued at \$465,600,000, produced on farms and in factories in the United States during the census year 1905, according to a statement issued by the census bureau. The largest total quantity was produced by the West North Central division. Among the States, Wisconsin ranks first as a butter producer, with Iowa second and Minnesota third, Pennsylvania, Michigan, Ohio, Illinois, New York, Texas and Indiana trailing along in the order as given. One and a half billion pounds of butter valued at over four hundred million dollars is going some along the butter route.

How The Body Kills Germs. Germs that get into the body are killed in two ways - by the white corpuscles of the blood, and by a germ-killing substance that is in the blood. Just what this substance is, we do not know. The blood of a healthy person always has some germ-killing substance in it to ward off the attack of disease. The fountain head of this is the stomach. A man who has a weak and impaired stomach and who does not properly digest his food will soon find that his blood has become weak and impoverished, and that his whole body is improperly and insufficiently nourished. To put the body in healthy condition, to feed the system on rich, red blood and throw out the poisons from the body, nothing in the past forty years has equalled Dr. Pierce's Golden Medical Discovery, a pure (genuine) remedy (without alcohol), of bloodroot, golden root and Oregon grape root, stone root, mandrake and queen's root with black cherry bark.

ROYAL BAKING POWDER Absolutely Pure The only Baking Powder made from Royal Grape Cream of Tartar NO ALUM, NO LIME PHOSPHATE

BRAD BAGLEY ELECTROCUTED.

He Went to the Chair Terribly Unnerved Before Execution.

Raleigh, N. C., May 18. - Praying for mercy and confessing his guilt, Brad Bagley, the largest man of the twelve who have died in the electric chair at the State's prison here since it came into service over a year ago, paid the death penalty between 10 and 11 o'clock 11 o'clock Friday, for shooting from ambush Chief of Police R. W. White, of Williamston, August 15th, last. The killing was to satisfy a grudge the negro had against the officer on account of his enforcement of the prohibition law against blind tigers. It was after White had started home late at night that Bagley fired a lead of buck shot into his back. White lived half an hour and in his dying statement said he recognized Bagley. Since then the negro has made a confession. He was terribly unnerved in the morning, but made a strong effort to control himself. He talked and prayed while the straps were being fastened about him in the death chair. Bagley left a note addressed to his friends in which he declared that he had obtained forgiveness for his terrible crime and other sins and was saved.

A Lesson We Must Learn.

We have too long tried to follow the custom of other sections in making pork on corn and other high priced concentrates. The pork producer and the breeder of pure-bred stock in the South, must alike learn the lesson of a maximum of cheap feeds harvested largely by the hogs and a minimum of concentrates. By growing two crops a year of those feeds most suitable for hog feeding, land worth from \$15 to \$40 an acre will produce as much or more pork than the lands of the great hog-raising States that are worth from \$100 to \$200 per acre.

When the hogs are on oats, wheat, barley, Bermuda grass or rape, at least one-fourth of a full grain ration should be given, consisting of about six or eight parts of corn or rice by-products and one part of tankage. When the hogs are on the clovers, cowpeas, soy beans and peanuts, one-fourth of a full grain ration should be given, consisting of corn, or rice by-products. These supplemental feeds must not on any account be omitted, for they not only prove immensely profitable on their own account, but add to the value of the cheap crops gathered by the hogs, and produce a healthier hog and a better carcass. - The Progressive Farmer.

Unwise Comment.

How much wiser would a man appear if he reserved his comment. The other day a woman said, "I hear that Valenciennes lace is going to be the wear again." "Is it?" growled her husband. "I'll bet you an oil well, then, it's something that doesn't cost a cent under 27 cents a yard." And his wife, seeing that he had a cinch, was silent, and would not stay in and call him.

Sane Philosophy.

About the sanest philosophy any woman can have is to aim to make the most of each day as it comes along and not borrow trouble from the future or bemoan the regretful past. Go through each day with a determination to make it just as useful, cheerful and helpful as possible. If you live out this belief your life cannot help but be successful.

Cannot Eliminate Love.

A periodical devoted to the drama pleads for plays based on some emotion other than love. The difficulty in producing such plays is that every play must have a hero, and in making a hero the playwright, as well as the audience, almost inevitably adopts the view expressed two thousand years ago by a scribe on one of the dead walls of Pompeii: "He who has never loved a woman is not a gentleman."

How The Body Kills Germs.

Germs that get into the body are killed in two ways - by the white corpuscles of the blood, and by a germ-killing substance that is in the blood. Just what this substance is, we do not know. The blood of a healthy person always has some germ-killing substance in it to ward off the attack of disease. The fountain head of this is the stomach. A man who has a weak and impaired stomach and who does not properly digest his food will soon find that his blood has become weak and impoverished, and that his whole body is improperly and insufficiently nourished.
